Eurozone Macro Observations & Commentary

European stocks gained after global regulators eased the leverage-ratio rule for banks. The Basel Committee on Banking Supervision diluted a planned debt limit for banks following a meeting in Switzerland yesterday. The committee said the leverage ratio, which penalizes low-risk financial activities and curtails lending, was adjusted after thoroughly analyzing bank data. Banking stocks posted the second-biggest gain on the Stoxx 600 after the news. Deutsche Bank and Barclays were among the big risers. **We like the EURO STOXX BANKS Index at current levels, and are advising our clients to add towards European Banking stocks.**

Our favorite European Banking Stocks are:

- Deutsche Bank
- Banco Santander
- HSBC

We believe the story happening in Europe has not been fully appreciated. There is still much fear surrounding the Eurozone and whether or not its early economic recovery is sustainable. Right now the main concern seems to be France and its debt load. The theory goes that France will be a drag on the entire region and pull it back into recession, but focusing on one country rather than the bigger picture would be a mistake. Germany, the biggest economy in the region, will continue to lead the way. German November factory orders beat expectations and has seen demand come from both within the region and outside of it, showing that demand abroad is strong as well.

Looking at the sovereign debt yields of the peripheral countries (Portugal, Italy, Ireland, Greece and Spain) one can see that even they are gaining strength. In 2011 and 2012 yields in spiked, as many believed there would be a disorderly collapse of the entire region. But today, yields are close, and in some cases, below pre-crisis levels. Other than Greece, investors in these peripheral countries' debt have had more confidence than most assumed would be the case. Ireland officially exited its bailout program in December and its first post-bailout debt auction occurred last week. Again, demand was strong for Ireland's debt, which was unthinkable just a couple years ago. Bids passed EUR 14 billion for a EUR 3.75 billion lot of 10-year bonds. The average yield was 3.5%

IMPORTANT DISCLAIMER: As a company purely focused on research, CGI LLC has no business relationships with the company covered in this report, be it investment banking, consulting or any other type of relationship. In addition, CGI LLC does not seek and does not intend to seek in the future any such businesses, maintains complete independence and has no conflicts of interest related to the companies in its research universe. Neither the analysts responsible for this report nor any related household members are officers, directors, or advisory board members of any covered company. No one at a covered company is on the Board of Directors of CGI LLC or any of its affiliates. In addition, CGI LLC and its employees, including the analyst who wrote this report, hold no equity, debt or other linked derivative investments, the value of which is related in any way, directly or indirectly, to the operating and stock price performance of the company covered in this report. No such investment positions are held in any of the competitors, suppliers or customers of the companies in our coverage universe. This report is provided for information purposes only. It should not be used or considered as an offer of securities and it does not constitute an offer of securities.

and 3.27% in the secondary market due to the strong demand. That is down from 14% in 2011 and an eight-year low. GDP is also growing, not only in Ireland but Portugal and Spain as well. Essentially, the Eurozone periphery has surpassed anyone's expectations.

Spain was one of the hardest hit economies during the global financial crisis and the following European sovereign debt crises. Before the crises the Spanish economy grew rapidly over many years attracting international investors. As a result of the crises, the economy tanked primarily due to the bursting of the once red-hot real estate industry. Spain was burdened with infrastructure projects like massive airports with no flights, unsold residential apartments and condos, etc. Not surprisingly, investors fled Spanish stocks. After years of low growth, the Spanish economy finally seemed to have turned a corner. Spain's service sector registered its fastest pace of growth in six-and-a-half years in December, fuelling optimism the economy could expand more than expected in 2014. **Last year the IBEX 35 rose 20.9% It is up by 3.80% year-to-date, the best among major European indices. Spanish stocks currently have a dividend yield of 3.9% and a P/E ratio of 19.8 relative to U.S. stocks' yield of 1.9% and P/E of 19.7. Our favorite stocks in Spain are Banco Santander SA, which offers investors a dividend yield of 8.80% and Repsol SA, with a dividend yield of 3.14%**

The recovery in Spain and Europe, as every recovery is, will be choppy and most likely slow. The fact remains, the Eurozone is recovering faster than anyone could have predicted just a couple years ago when there was talk of dismantling the Euro and the region falling apart.

Fourth quarter earnings reports start to trickle in this week. The focus is on the financial services sector. Economic news this week generally is expected to confirm slow, but steady growth in the US. Anticipation of announcements on share buybacks and dividend increases when fourth quarter results are released is expected to help big cap companies with large cash holdings (in particular big Dow Jones Industrial Average stocks).

Weekly Investment Conclusion

Short and intermediate technical indicators for most equity markets and sectors are overbought and showing signs of peaking.

Midterm US Presidential Cycle years show that US equity markets show an average correction by the S&P 500 Index of 1.7% in the month of January followed by strength into mid-April. History appears to be repeating itself.

Look for renewed seasonal buying opportunities in economic sensitive sectors following a brief period of weakness into January.

Selected markets like Germany, France, Spain, Japan continue to outperform US benchmarks.

We advise clients to add towards favorite sectors, which continue to show seasonal strength, such as:

- **Automotive OEM's and suppliers**
- **Industrials**
- **White metals**
- **Base and precious Metals**
- **Biotech**
- **Medical Devices**
- **Health Care Services**
- **Small Cap**
- **Software**
- **Semiconductors**

Global Macro Commentary & Events

Upcoming Macro Events:

- **December Retail Sales** to be released at 8:30 AM EST on Tuesday is expected to remain unchanged from November versus a gain of 0.7% in October. **Excluding Auto Sales**, December Retail Sales are expected to increase 0.4% versus a gain of 0.4% in November.

US Market Commentary & Weekly Charts

The S&P 500 remains in a flat range that has defined trading activity since 2014.

Resistance is evident at 1845, which is constraining the intermediate upside momentum and leaving the door open to a more substantial pullback toward support at 1775.

The long-term trend of the market remains positive, defined by a series of higher-highs and higher-lows.

Volatility remains typical surrounding first quarter earnings season, which just began last week; the next sustained seasonal up-leg for equities begins closer to the end of February.

Equity markets, reaction was prominent in interest rate sensitive stocks as treasury yields took a nosedive. Bonds seasonally decline between now and April, placing pressure on interest rate sensitive stocks into the month of March.

Homebuilding stocks conclude their period of seasonal strength at the beginning of February.

REITs begin a period of seasonal strength not long after the seasonal trend for homebuilders end Real Estate Investment Trusts, or REITs, seasonally gain from March through to May.

REITs, Utilities, and Homebuilding stocks were all up over 1% on the session due to the decreased cost of borrowing.

Each of these sectors are showing signs of charting a short-term low around present levels, despite seasonal tendencies that are generally negative for these stocks that derive their value based on the trend of bond yields.

The VIX Index fell 1.61 (11.70%) last week.

The Index once again trades below its 20, 50 and 200 day moving averages.

The S&P 500 Index added 11.00 points (0.60%) last week.

Trend remains up. The Index remains above its 20, 50 and 200 day moving averages.

Short term momentum indicators are overbought and showing early signs of rolling over

Percent of S&P 500 stocks trading above their 50 day moving average increased last week to 74.80% from 71.60%.

The index remains intermediate overbought.

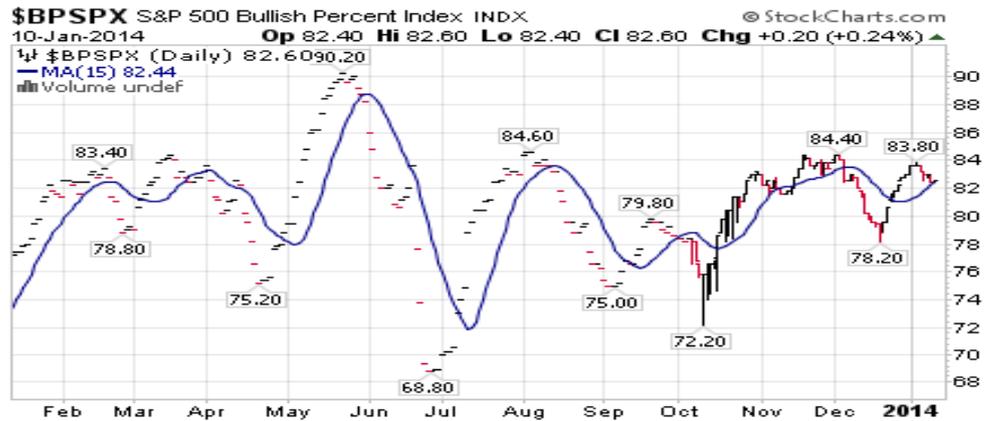

Percent of S&P 500 stocks trading above their 200 day moving average increased last week to 82.80% from 81.80%.

The index remains intermediate overbought.

Bullish Percent Index for S&P 500 stocks slipped last week to 82.60% from 83.60%, but remained above its 15 day moving average.

The Index remains intermediate overbought.

The Dow Jones Industrial Average slipped 32.95 points (0.20%) last week.

Trend remains up. The Average remains above its 20, 50 and 200-day moving averages.
